Communities**

Non-financial support

One-Stop Shop (OSS)

One-Stop Shops (OSS) can play a crucial role in supporting building requalification by serving as a centralized resource hub for information, assistance, and coordination of various services.

Here are ways in which OSS can contribute to building requalification efforts:

Building Regulations

Provide information on local building regulations, codes, and zoning requirements to individuals and businesses interested in requalifying or renovating their properties.

Community Engagement

Organize workshops, seminars, and community events focused on building requalification. These can cover topics such as sustainable building practices, energy-efficient technologies, and the benefits of preserving historical structures.

One-Stop Shop (OSS)

Technical Support

Connect individuals with architects, engineers, and other technical experts who can provide guidance on the design and technical aspects of building requalification projects. Offer or facilitate access to energy audits to assess the energy efficiency of buildings.

Coordination of Services

Implement case management services to assist property owners in navigating the complexities of building requalification. This includes helping them access the right resources, understand timelines, and coordinate various aspects of the project. Collaborate with multiple entities to streamline the building requalification process and ensure a coordinated approach.

Local Action Groups (LAGs)

LAGs are **entities that promote sustainable development at the local level**, actively involving the community in the design and implementation of development strategies. Participation in LAGs provides opportunities for **civic engagement** and enhances **local resources**, fostering **territorial renovation** not only economically but also socially and culturally.

Local Action Groups (LAGs)

Community Needs Assessment

Conduct a thorough assessment of local community needs related to building requalification. This involves identifying areas that require renovation, revitalization, or improvement, and understanding the specific challenges faced by property owners.

Networking Opportunities

Facilitate networking opportunities for property owners, builders, and contractors within the community. This can create a platform for knowledge exchange, collaboration, and the sharing of best practices related to building requalification.

Local Action Groups (LAGs)

Cultural and Heritage Preservation

Emphasize the preservation of cultural and heritage aspects within the community during requalification projects. This can involve incorporating historical elements into renovations, preserving architectural styles, and ensuring that the community's unique identity is maintained.

Project Coordination and Management

Act as a coordinating body for building requalification projects, helping streamline communication and collaboration between various stakeholders, including property owners, local authorities, contractors, and community members. LAGs can assist in project management aspects, ensuring smooth execution.

Local Action Groups (LAGs)

Policy Advocacy

Advocate for supportive local policies that encourage and facilitate building requalification. LAGs can engage with local authorities to streamline regulatory processes, incentivize requalification efforts, and remove barriers that may hinder progress.

Technical Assistance and Expertise

Connect property owners with technical experts, such as architects, engineers, and urban planners, who can provide guidance on building design, energy efficiency, and compliance with local building codes. LAGs can facilitate workshops or training sessions to disseminate relevant technical knowledge.

Third-Sector Associations

Third-sector associations, such as non-profit organizations and volunteer groups, play a fundamental role in providing **consultancy** and **support**.

They can offer career guidance, **legal advice**, **psychological support**, and other crucial resources to enhance the quality of life for individuals and communities.

Energy Communities

Energy communities represent an innovative form of **citizen participation** in the **energy sector**. Beyond providing sustainable energy solutions, these communities can contribute to **social and environmental renovation** through environmental **education**, creating **local jobs** in the renewable energy sector, and promoting responsible **consumption practices**.
